**Bi-color Surface Mount Chip LEDs** 

## **Data Sheet**

#### Description

The HSMF-C15x series of bicolor chip-type LEDs is designed in an industry standard package for ease of handling and use. These bicolor LEDs are available as high efficiency red/yellow, high efficiency red/green, yellow/ green, orange/green and green/amber. The HSMF-C15x has the widely used 3.2 x 2.7 mm footprint and wide viewing angle make this LED exceptional for backlighting applications.

All packages are compatible with reflow solder processes. The small size and wide viewing angle make these LEDs prime choices for backlighting applications and front panel indicators especially where space is a premium.

Notes:

1. The luminous intensity I<sub>V</sub> is measured at the peak of the spatial radiation pattern which may not be aligned with the mechanical axis of the LED package.

2. The dominant wavelength,  $\lambda d$ , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.

3.  $\lambda_{1/2}$  is the off-axis angle where the luminous intensity is  $\frac{1}{2}$  the peak intensity.
